

# ECOSTAR PLUS™

## Hard Fescue

Shade Tolerant

Drought Tolerant

Dark Color

Low maintenance has never looked so good! EcoStar Plus has reduced vertical growth compared to older hard fescues, which means less frequent mowing while maintaining a managed turf look.

EcoStar Plus is a superior hard fescue with speedier greenup, darker green color, denser turf, and better performance under turf conditions. EcoStar Plus performs well in diverse environmental conditions, from hot, humid summers to cold winters.

### Key features

- Reduced Vertical Growth
- Beautiful Seed Heads (no-mow)
- Excellent Density
- Improved Salt Tolerance

**LOW  
INPUT  
TURFGRASS**

### Technical Information

#### Applications

EcoStar Plus excels when used in low input situations like golf course roughs and home lawns, or even roadsides, berms, and reclamation sites. It is well suited to golf course roughs, sending up graceful seed heads during the summer and adding color and contour to your landscape.

EcoStar Plus has moderate salt tolerance. In a Utah trial where salt levels are in the 10-12 dS m-1 range during the summer but drop with snow melt in winter and spring, EcoStar Plus was mid-ranked in the trial. When used in areas with salt levels above 6 dS m-1 periodic flushing of the soil profile is recommended.

EcoStar Plus is a good choice when used alone or matched with other Jacklin grasses in mixtures and blends for permanent turf in temperate and transition zone climates.

#### Maintenance

Seeding Rate:	4-6lbs./M*
Maintained at Turf Heights:	0.5-1lbs./M (thin)
Unmown Areas:	3-5lbs./M (dense)
Overseeding into Existing Turf:	6-10lbs./M
Mowing (Recommendation):	1.5-3.0"

\*M=1,000 square feet
