

SPRINKLER™

Slender Creeping Red Fescue

High Salt Tolerance

Medium Green Color

Extremely Fine Texture

Sprinkler brings enhanced tolerance to salt and drought among the sub-species of Slender Creeping Red fescue.

Sprinkler forms a dense turf with very fine leaf blades, while slowly “creeping” through underground rhizomes. It specializes in low input scenarios with increased salt and drought tolerance, while retaining resistance to diseases including Dollar Spot and Red Thread.

Key features

- Salt Tolerance
- Quick Green-Up
- Very High Density

**INCREASED
SALT
TOLERANCE**

Technical Information

Applications

Sprinkler Slender Creeping Red fescue specializes in areas under low mowing heights thanks to its extremely fine leaves and high shoot density as well as a component in mixes for soils high in salinity. This is a low input variety regarding nutrient use, drought tolerance, and salt tolerance. Ideal for use in moderate to temperate climates, Sprinkler can help reduce the impact on the environment as well as maintenance budget.

Compared to its counterpart, Strong Creeping Red fescue, Slender Creepers are not as dark in color, nor are they as aggressive through their weaker rhizome production. In return, Slender fescue provides advantages in density and tolerance to close mowing and salt tolerance.

Maintenance

Seeding Rate:	4-6lbs./M*
Maintained at Turf Heights:	0.5-1lbs./M (thin)
Unmown Areas:	3-5lbs./M (dense)
Overseeding into Existing Turf:	6-10lbs./M
Mowing (Recommendation):	1.5-3.0”
Mowing (Down To)	0.200”

*M=1,000 square feet
