

# TOP FLIGHT™

## Perennial Ryegrass

**Fine Leaf Texture**

**Warm-Season Overseed**

**Deep Green Color**

**Top Flight is a specially designed blend of perennial ryegrasses created solely for the warm-season overseed market**

Top Flight creates a lush green turf that is excellent for golf courses, parks, sports fields and home lawns. Top Flight germinates fast while quickly establishing a dense turf. When transitioning back to warm-season turf, Top Flight will be easier to remove or naturally transition compared to other elite perennial ryegrasses.

### Key features

- Easy Transition Back to Warm-Season Turf
- Fast Establishing Dense Turf
- Ryegrass Overseed Blend

**VALUE  
PERENNIAL  
RYEGRASS**

### Maintenance

Seeding Rate (cool):	8-10lbs./M*
Overseed (warm):	15-20 bs./M*
Mowing (Recommendation):	1.5-2.5"
Mowing (Down to):	0.5"

\*M=1,000 square feet

### Technical Information

#### Applications

Top Flight is a quality perennial ryegrass blend ideal for virtually all golf, sports turf, and recreational applications that require warm season overseeding or cool season applications that are looking for an affordable perennial ryegrass option. Featuring dark perennial ryegrass varieties with strong genetics and mechanical purity, Top Flight is a popular choice when improved ryegrass quality is desired over annual ryegrass options. Top Flight is an excellent solution for fall overseeding of turf to provide a boost in turf quality after rough summers or allowing for year-round playability in warm season climates.

#### Establishment

Extra care should be taken during the first year for optimal establishment and to aid in weed suppression. Top Flight can be planted in sun or shade areas when night temperatures are about 50 degrees and the day temperatures are 70 degrees. In order to prepare for seeding, it is recommended to relieve current canopy density to allow Top Flight to contact the soil, ensuring germination. After seeding, irrigation should be applied 2-3 times daily at a light rate. Once you are ready to transition back to the desired warm-season turf, Top Flight has the ability to be chemically removed from the stand, reverting it back into the original turf, or letting nature take its course in the South's late spring heat in a natural transition.
